## IN THE CLAIMS

Please cancel pending claims 1-63 without prejudice.

Please add new claims 64-84 as follows:

- 64. (NEW) An intracorporeal device comprising an elongated member having means for causing a substantially linear change in stiffness over a longitudinal length of the elongated member.
- 65. (NEW) The device of claim 64 wherein the length of the elongated member has a continuously changing taper angle producing a curvilinear profile that is configured to produce the substantially linear change in stiffness over said length.
- 66. (NEW) The device of claim 64 wherein the elongated member has a plurality of tapered segments configured to produce the substantially linear change in stiffness over the length of the member.
- 67. (NEW) The device of claim 66 wherein each tapered segment has a substantially constant taper angle.
- 68. (NEW) The device of claim 66 wherein the elongate core member comprises at least 3 to about 100 tapered segments.
- 69. (NEW) The device of claim 64 wherein the elongated core member comprises a material with changing hardness in a longitudinal direction configured such that the change in hardness produces a substantially linear change in stiffness along the length of the core member.
- 70. (NEW) The device of claim 64 wherein the elongated member tapers distally to a more flexible distal portion.

71. (NEW) A guidewire comprising an elongate core member with at least one longitudinal section having a diameter defined substantially by the formula:

$$D_L = \left[\frac{64CL}{E\pi} + D_0^4\right]^{\frac{1}{4}}$$

where  $D_L$  is the diameter of the elongate core member at length L from a position of starting diameter  $D_0$ , E is the modulus of elasticity of the core member material, and C is a constant that depends on the boundary conditions of the longitudinal section.

- 72. (NEW) A guidewire as defined in claim 71, wherein said core member is formed of one of the group constituting stainless steel, NiTi alloys and combinations thereof.
- 73. (NEW) A guidewire as defined in claim 71, wherein said core member has a proximal core section, said proximal core section being coated with a lubricious coating.
- 74. (NEW) A guidewire as defined in claim 71, wherein said core member has a distal core section, said distal core section being coated with a lubricious coating.
- 75. (NEW) A guidewire as defined in claim 71, wherein said core member has a distal core section, and a flexible body disposed about and secured to the distal core section.
- 76. (NEW) A guidewire as defined in claim 71, wherein the guidewire comprises at least 3 to about 100 tapered segments.
- 77. (NEW) A guidewire as defined in claim 71, wherein the guidewire comprises at least 5 to about 20 tapered segments.

78. (NEW) A guidewire comprising an elongate core member with at least one longitudinal section having a moment of inertia defined substantially by the formula:

$$I_L = \frac{CL}{E} + I_o$$

where  $I_L$  is the moment of inertia of the longitudinal section at length L from a position of starting inertia  $I_0$ , E is the modulus of elasticity of the longitudinal section, and C is a constant that depends on the boundary conditions of the longitudinal section.

- 79. (NEW) A guidewire as defined in claim 78, wherein said core member is formed of one of the group constituting stainless steel, NiTi alloys and combinations thereof.
- 80. (NEW) A guidewire as defined in claim 78, wherein said core member has a proximal core section, said proximal core section being coated with a lubricious coating.
- 81. (NEW) A guidewire as defined in claim 78, wherein said core member has a distal core section, said distal core section being coated with a lubricious coating.
- 82. (NEW) A guidewire as defined in claim 78, wherein said core member has a distal core section, and a flexible body disposed about and secured to the distal core section.
- 83. (NEW) A guidewire as defined in claim 78, wherein the guidewire comprises at least 3 to about 100 tapered segments.
- 84. (NEW) A guidewire as defined in claim 78, wherein the guidewire comprises at least 5 to about 20 tapered segments.
